

Eldfisk II

North Sea

Eldfisk is an oil field that also contains some gas. The field was discovered in 1970, approved for development in 1975 and went into production in 1979. Eldfisk consists of a total of five platforms. Four of them are connected by walkways (Eldfisk Center). The fifth, Eldfisk 2/7 B, is about 6 kilometers northwest of Eldfisk Center.

We supplied the project with steel profiles for doors and walls from profile system SP 35000z and SP 76500z.

The project manager was IKM/dsc Engineering as.

- Door and wall partitions:** Steel profile systems SP 35000z and SP 76500z
- Other:** Sendzimir galvanized steel. Fire resistance A60 and unclassified
- Built in:** 2014
- Construction company:** Conoco-Phillips
- Producer:** Lande Mek.Verksted A/S

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
