

Forensic Psychiatric Center Trelleborg

Construction began on the Trelleborg Forensic Psychiatric Center in 2014 and was completed in 2016. The center is a central unit for forensic psychiatry in Skåne, where the primary activity is “initial care”. Education and research linked to various healthcare professions, such as doctor, nurse, attendant, psychologist and counselor, are also conducted here. The project owner was Region Skåne.

For the construction of the Forensic Psychiatric Center, we supplied steel profiles from systems SP 76500, SP 79000 and SP 9711000.

Door and wall partitions: Steel profile systems SP 76500, SP 79000 and SP 9711000

Built in: 2014

Architect: BSK Arkitekter

Producer: Skånska glasbyggarna AB

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
