

North Estonia Medical Centre Tallinn

North Estonia Medical Centre is one of Estonia's largest hospitals. Today, a total of about 4,000 doctors, nurses, care staff and specialists work at this ultramodern facility. With the help of partitions with profiles from Stålprofil, the builder was able to create attractive and sustainable solutions that also met the established fire safety requirements.

| | |
|----------------------------------|-------------------------------------------------------------------------------------------------------------------|

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
