

Perukmakaren

Gothenburg

The Perukmakaren block was built in the late 1960s as a business and office building with a large integrated parking garage in downtown Gothenburg. In 2013 and 2014, the parking garage and facades were equipped with new entrances and stairwells. The offices along Drottninggatan were turned into a hotel and shops, and the former arcades were built in to create more space and enhance the prominence of the shops. These improvements have cut energy consumption in half and our steel profiles are a contributing factor to that reduction. The property is now LEED-certified.

Door and wall partitions:	Steel profile systems SP 95000, SP 956500, SP 957000, SP 976500, SP 979000, SP 96000
Other:	Acid-proof stainless steel EN 1.4404
Built in:	Renovated in 2013/2014
Architect:	White
Construction company:	Veidekke (ordering party: Vasakronan)
Producer	Fasadsystem AB

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
