

Radiotherapy

Lund

Patients from all over southern Sweden receive treatment at the radiation therapy center at Skåne University Hospital.

To meet the rising need, a modern new building was constructed with six new radiotherapy rooms.

Skånska Glasbyggarna designed the building based on the customer's wishes and set fire protection requirements based on the National Board of Housing, Building and Planning's construction regulations.

The property owner is Skåne Region Service.

Door and wall partitions: Steel profile systems SP 35000 and SP 79000

Built in: 2011

Construction company: NCC Construction

Producer: Skånska Glasbyggarna

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
