

Travel Center

Frölunda

When the architects at Sjögren Arkitekter designed Frölunda's travel center, they wanted to create a building that offered a contrast to the large-scale character of the surrounding area. Together with stores and businesses, the building forms a pleasant pedestrian street at Frölunda Torg. To unite the indoors and outdoors, the ground floor has glass walls. Here, we supplied steel profiles from our systems SP 95000 and SP 956500, which are manufactured in solid stainless steel.

Door and wall partitions:	Steel profile systems SP 95000 and SP 956500
Other:	Solid stainless steel. Acid-proof EN 1.4404
Built in:	2011
Architect:	Sjögren Arkitekter AB
Producer:	Tollor

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
