

# Champalimaud Foundation

## Lisbon

The Champalimaud Foundation focuses on pioneering research and works to find new discoveries and build knowledge to improve health and well-being in people worldwide.

The property's construction was adapted entirely to their operation. SISAF manufactured and assembled partitions with profiles from Stålprofil that are designed to meet requirements for fire protection and appearance. For door and wall partitions, we supplied stainless steel profiles from systems SP 976500 and SP 979000. Steel profiles from SP 95000 were supplied for the sliding doors.

**Door and wall partitions:** Steel profile systems SP 976500, SP 979000, sliding doors in steel profile system SP 95000.

**Other:** Acid-proof stainless steel, EN 1.4404

**Built in:** 2009

**Architect:** Charles Correa

**Construction company:** Mota-Engil/HCI

**Producer:** TRIA, [www.tria.pt](http://www.tria.pt)

### Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

### Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
