

Rambergsskolan

Gothenburg

Rambergsskolan, a school in the city district of Brämaregården in Gothenburg, is a grand building erected in 1916 in the Nordic National Romantic architectural style. When it was time to renovate the school, great importance was attached to two issues – fire safety and the safety of the children.

The choice of our tried-and-tested, type-approved arched doors and glass partitions allowed us to follow the school's architectural style while meeting fire safety standards. There's no other solution like it on the market. Profiles with our integrated finger trap gaskets were chosen to prevent school-children from getting their fingers caught in the doors.

Door and wall partitions: Steel profile system SP 76500, SP 79000, SP 35000

Built in: 2019–2021

Architect: Erséus

Construction company: RA Bygg

Producer: Fasadsystem Stål i Borås AB

Glass supplier: Vetrotech (EI30 and EI60)

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
