

Våghuset

Gothenburg

In Masthuggskajen, you'll find Våghuset, an impressive 13-story building with clear elements inspired by the Göta River. Våghuset is a 10,000-square-meter office building completed in 2022, where the design reflects the life and dynamics of water, including contrasting features on sections that have been fire and burglary classified by Stålprofil.

Våghuset is a BREEAM-certified building with an Excellent rating, indicating high standards for sustainable material selection, natural light, and air quality. The Masthuggskajen project, which includes Våghuset and Brick Studios, is also the first urban development project to be awarded certification for sustainable urban development as part of the Citylab project.

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
