

Brick Studios

Gothenburg

Brick Studios is a property that stands out, both in its offerings and in its design. The building is visible from a distance, contributing to giving the new city district a distinctive expression. Together with Våguset, Brick Studios forms the first part of the expansion of Masthuggskajen into an entirely new neighborhood in the growing city of Gothenburg.

The doors are manufactured using Stålprofil's profiles SP 79000, as there is a requirement for fire class EI60 in combination with burglary class RC3, which is a tested and approved solution.

Brick is a BREEAM-certified building with an Excellent rating, meaning high standards are set for the selection of sustainable materials, natural light exposure, and air quality. The Masthuggskajen project is also the first urban development project to be awarded certification for sustainable city development as part of the Citylab project.

Profile system:	Stålprofilssystem SP 79000
Classifications:	EI60, RC3
Built in:	2022
Construction company:	NCC
Architect:	White Arkitekter
Producer:	Fasadsystem Stål AB

Possibilities that provide added value

Our steel profile systems are developed to meet high requirements for design, safety and energy efficiency. To optimize the selection and use of our profiles, we provide manufacturers, architects and builders with full support in the construction process. At any time, you can find advice and guidance on product choice, construction, and the latest profile technology. Our construction, preparation and calculation system - KBK, will provide you valuable support throughout the process. Contact us and we will help you!

Details that create possibilities:

- Extra narrow and wide profiles
- Profiles adapted for module locks
- Arches, round windows and arched doors
- Finger trap gasket
- Profiles for door leaves and doorframes with grooves for weather stripping
